

Machine Learning

OMAR JUÁREZ GAMBINO, PHD

Configuration of the development environment

Conda

Is an open source package management system and environment management system

It allows to create environments for installing different Python versions and libraries

These environments can be saved and switched between as required

<https://docs.conda.io/en/latest/miniconda.html>

Conda

Create a development environment

- `conda create --name cursoml`

List the created environments

- `conda env list`

Activate the environment

- `conda activate cursoml`

Deactivate the environment

- `conda deactivate`

Install a package in the active environment

- `conda install scikit-learn`

List the installed packages in the active environment

- `conda list`
